

CYCLE OF EXPERIMENT AND EXPERIENCE

The Cycle of Experiment and Experience looks at the system from the classroom up; you see how actions in individual classrooms can shape the whole system.

Parts of the Cycle

The **Inner Loop** of this cycle demonstrates how teachers can begin experimenting in their classrooms, learn from their experiences, share with their colleagues, and then begin to plan new experiments.

The **Outer Loop** shows how administrators can perpetuate and accelerate the cycle by providing resources, time, encouragement and other forms of support for their teachers and staff.
