

Tips & Tricks for edX-forums

Here are some tips & tricks to help you navigate the edX-forums for Denial101x.

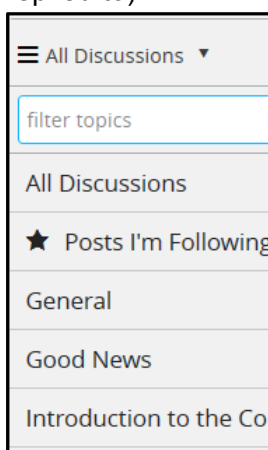

Navigating the forums

Accessing the forums works best via the corresponding menu item:

Check out the three drop-down menus:

1. Use the list to pick a specific view or sub-forum to access - “All Discussions” is the default and “Posts I’m Following” comes in handy to keep track of posts you want to keep an eye on (if you read an interesting discussion, click on the “star” in the first comment to start following it - you’ll have to do this manually even for posts you replied to)

2. If you want to read-up on forum content since you last visited, select “Unread” from this drop-down to narrow down the posts displayed:

Note: if you want to refresh the list of displayed posts, toggle between “Show all” and “Unread” in the drop-down - do not refresh the page via your browser as this will reset the main selection to “All Discussions” and you’ll need to switch this back manually to the view you were in.

3. The third drop-down can be used to determine the sort-order with “recent activity” most likely being the most helpful one. Posts created or replied to recently will show

Tips & Tricks for edX-forums

up at the top of the list then:

How to know what might have changed

If the number is white on blue, it means that the post was created new since you last visited:

If the number is black on white, a response or comment was added to a post (or some other update happened, like editing a comment)

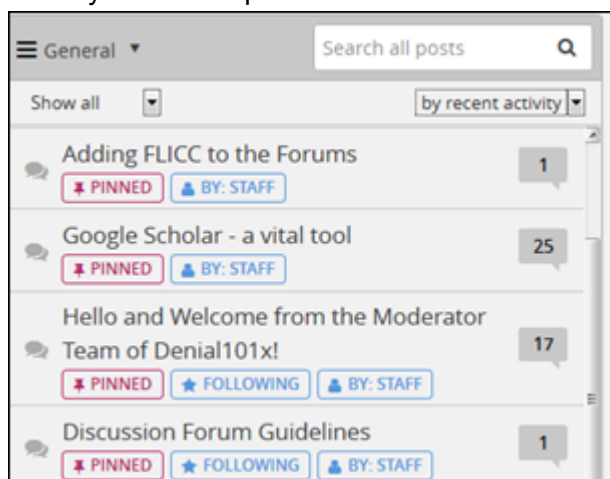

If the number is black on grey, then your response or comment was the last one added or there was no new activity at all

Check out pinned forum posts

Some forum posts - usually created by Community TAs or Staff - have been pinned to the top in order to make them "stand out" and be easily accessible. Make sure to check them out as they contain important information!

Finding new content in long threads

In some posts with many responses and comments it can be difficult to locate new content via scrolling through it

Tips & Tricks for edX-forums

What you can then do is to use your browser's search function by hitting <CTRL>+F. In Firefox a search box will be displayed e.g. at the bottom of the window:

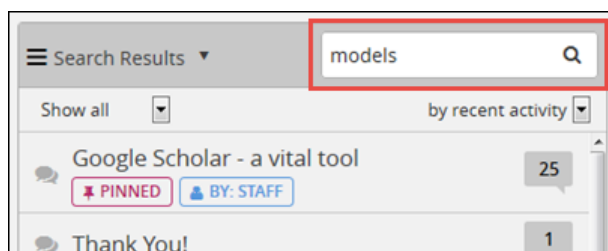

Depending on how long ago you last checked a post, you can now search for "hour", "minute" or "day" to find recent updates

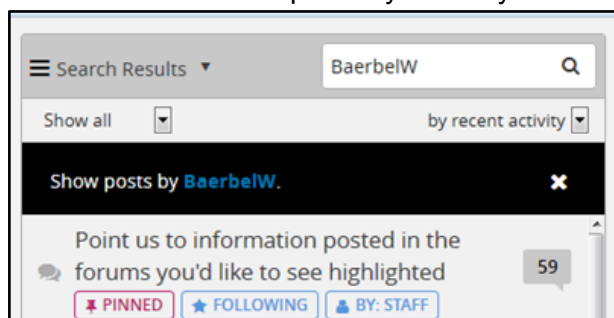

Looking for posts with specific content

You can use the search box to see if other have already posted about something you'd like to discuss:

You can also look for posts by one of your coursemates by entering her/his username:

If you click on the highlighted bar, you'll end up at the overview page listing all posts and comments by the student. You'll get to the same page by clicking on a coursemate's name from any of the posts s/he made in the forum.

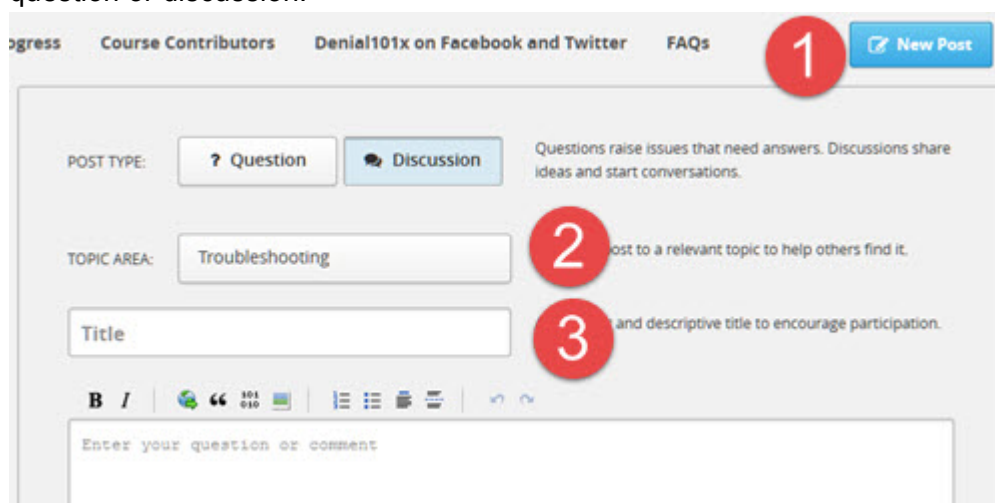

Follow links from posts with the CTRL-key clicked

If you just click on a link within a forum-post, the page will be opened in the same tab. If you then use the back-function to go back to the forum-post, the edX platform always does a page refresh which loses any restrictions you may have had previously set via the drop-downs and revert back to "All discussions" and "Show All".

Creating a new post (edX-lingo for thread)

Tips & Tricks for edX-forums

Click on the “New Post” button (1) from any forum page and then decide if it’s going to be a question or discussion.

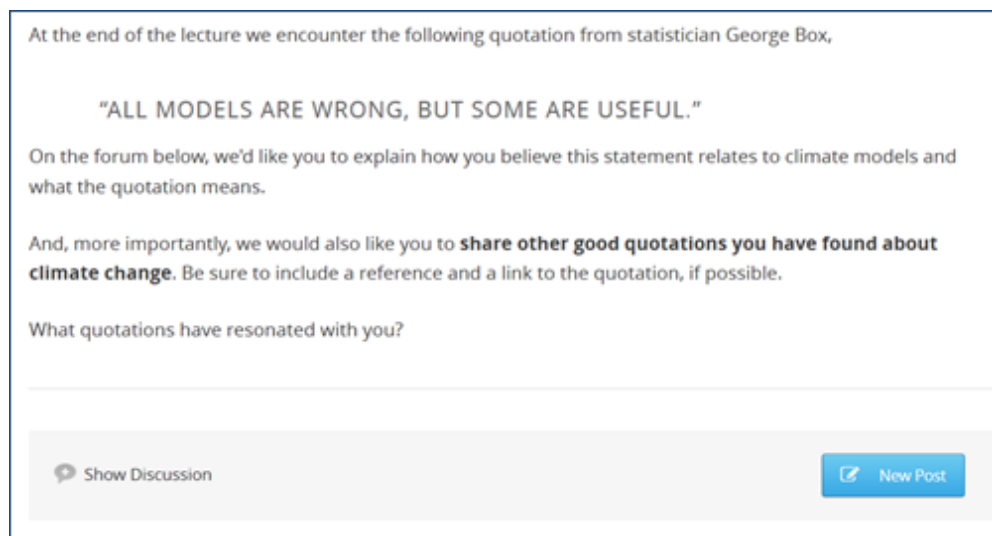

The screenshot shows the 'New Post' form in an edX forum. At the top right, a blue button labeled 'New Post' is circled with a red '1'. Below it, the 'POST TYPE' section has two buttons: 'Question' and 'Discussion', with 'Discussion' selected. To the right of these buttons is a short description: 'Questions raise issues that need answers. Discussions share ideas and start conversations.' Below the post type section is the 'TOPIC AREA' dropdown menu, which is set to 'Troubleshooting' and circled with a red '2'. Below that is a text input field for the 'Title', circled with a red '3'. At the bottom of the form is a rich text editor with a toolbar and a text area containing the placeholder text 'Enter your question or comment'.

Select the relevant sub-forum via the “TOPIC AREA” list and give your post a meaningful title (3)

Forum-prompts from within Courseware to go along with specific lectures

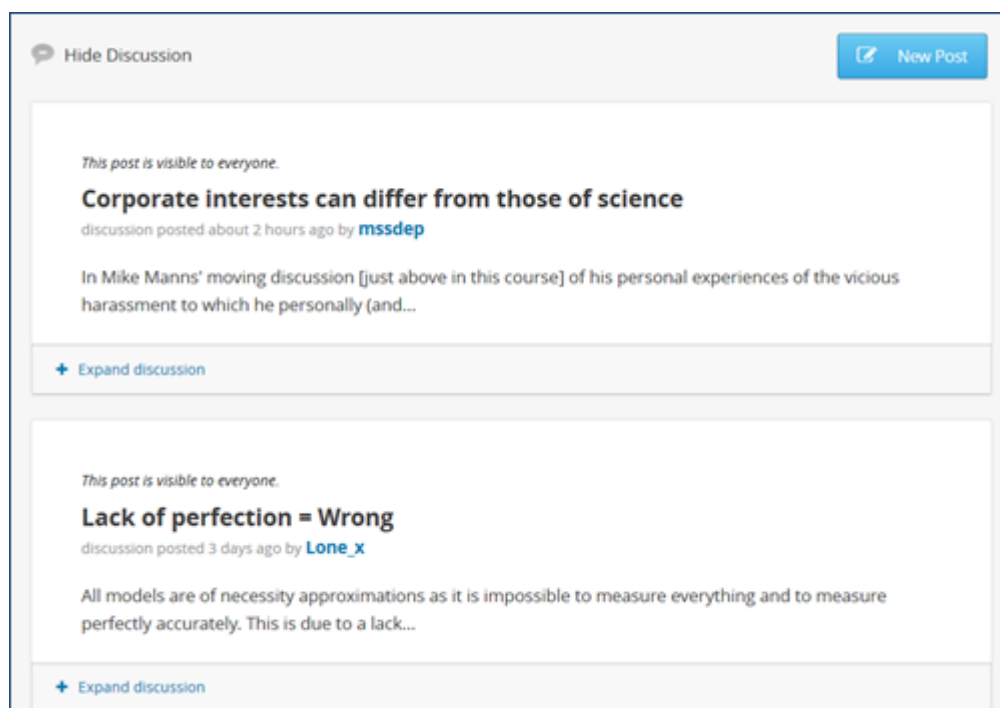

You’ll sometimes see prompts like this one asking you for feedback about what you just learned:

The screenshot shows a forum prompt. It begins with the text: 'At the end of the lecture we encounter the following quotation from statistician George Box,'. Below this is a quote: '“ALL MODELS ARE WRONG, BUT SOME ARE USEFUL.”'. The prompt continues: 'On the forum below, we’d like you to explain how you believe this statement relates to climate models and what the quotation means.' It then asks: 'And, more importantly, we would also like you to **share other good quotations you have found about climate change**. Be sure to include a reference and a link to the quotation, if possible.' Below this is the question: 'What quotations have resonated with you?'. At the bottom left is a button labeled 'Show Discussion' and at the bottom right is a blue button labeled 'New Post'.

In order to see what others have already posted, click on “Show Discussion”, scroll through the list, expand and then perhaps add your thoughts to one of the already existing posts instead of creating your own.

Tips & Tricks for edX-forums

During Denial101x's first iteration many students used the "New Post" option which led to many single-post threads where otherwise some discussions might have happened.

Options available for a post

The options available depend on whether it's your own or a coursemate's post, but you have up to three options available:

You can upvote a post or response a coursemate posted by clicking on "+". You can decide to follow a post by clicking on "*". What you see for the more-menu "..." depends on whether it's your own post or not.

If you discover typos or similar issues with your own post, response or comment, you can correct it by selecting "Edit" from the more-menu.

If the post doesn't follow the forum guidelines you can report it. Unfortunately, this does only set a flag but doesn't tell us why it was reported as the edX-forums don't yet have a means via which you can add a comment only visible to staff explaining why you flagged something.
